PROFESSIONAL SUMMARY

Fourth-year Bachelor of Computing (Co-op) student at the University of Guelph with three completed internships spanning full-stack development across supply chain, energy, and e-commerce domains. Proficient in building and maintaining web applications with hands-on experience in REST API design, cloud services (AWS), and relational databases. Proven ability to deliver in Agile, remote-first teams while contributing across both frontend and backend responsibilities.

EDUCATION

Bachelor of Computing (Co-op)

University of Guelph | Reynolds School of Computer Science | Minor in Business

Guelph, CA

April 2027

Relevant Coursework: Data Structures, Computer Algorithms, Object-Oriented Programming, Software Engineering, Software System Development & Integration, Operating Systems, Systems Analysis & Design in Applications, Computer Networks

TECHNICAL SKILLS

Languages: Python, TypeScript, Java, C, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: React, FastAPI, Tailwind CSS, Zustand, SQLAlchemy

Tools: Git, Docker, AWS, Bash, Linux, cPanel

Interests: Software Development, Artificial Intelligence, Cyber Security

WORK EXPERIENCE

Application Developer Intern

Badger Redwood

Mississauga, CA

May 2025 – August 2025

- Implemented and maintained full-stack features for a supply chain management application using React, TypeScript, and Python across rotating frontend and backend responsibilities
- Built responsive UI components and interactive dashboards to visualize client supply chain data
- Wrote and maintained unit and integration tests across both the frontend and backend, contributing to a more reliable codebase
- Participated in Agile sprints and remote standup meetings, collaborating with distributed team members to analyze requirements, fix bugs, and deliver tasks on schedule

Software Development Intern/Co-Op (Remote)

JREN Energy

Calgary, CA

January 2025 – May 2025

- Maintained and optimized the company's public-facing website, improving page performance, resolving bugs, and ensuring cross-browser compatibility
- Developed new features and fixes for *Chilink*, the company's core conferencing application built using React (JavaScript) for the frontend and integrating with a MariaDB database.
- Collaborated with a remote team in an Agile workflow, contributing to sprint planning, code reviews, and delivering updates through version-controlled releases using Git

Intern Software Developer (Remote)

RAA I.T.

Salford, UK

May 2024 – August 2024

- Developed a Customer Management and Support System to represent streamlining customer and product handling.
- Built key features such as user authentication, role-based access control, and real-time WebSocket-based chat.
- Designed and implemented product management workflows, including CRUD operations and image handling.
- Enabled admin-specific operations like bulk customer management and dynamic conversation tracking.
- Made use of FastAPI, SQLAlchemy ORM, OAuth2, and WebSocket for a robust backend framework.

PERSONAL PROJECTS

UIAPhotography

Guelph, ON

Technologies Used: Python, React, Zustand, FastAPI, PostgreSQL (Neon), Stripe, Cloudinary

December 2025

- Built a full-stack photography portfolio and e-commerce platform enabling users to browse galleries, purchase digital and physical artwork, and complete checkout via Stripe integration
- Developed a RESTful API with FastAPI handling product management, order processing, shipping/tax calculation, and automated order confirmation/update emails
- Designed a responsive React frontend with an admin dashboard for managing products, orders, and portfolio content, using Zustand for state management

FindYourCribb (Backend)

Guelph, ON

Technologies Used: Python, FastAPI, PostgreSQL (Neon), AWS S3, Cloudinary, React, JavaScript

Ongoing

- Developed the backend for a fully-functional student housing platform featuring property listings, sublets, a roommate matching with weighted compatibility scoring, and an integrated marketplace
- Designed a RESTful API with 100+ endpoints, four independent authentication flows (JWT/OAuth2), role-based access control, and automated email notifications via Resend
- Implemented a scheduling system with viewing slots, booking management, and a daily cron job for reminder emails using APScheduler
- Integrated AWS S3 and Textract for landlord automated verification
